## Education

**2018 - 2020 & 2020-2022**

### **Medieinstitutet – Web & frontend developer**

Create fullstack applications using WordPress or Laravel, including frontends frameworks such as Vue, jQuery, or plain JavaScript.

Database engineering and security; build scalable schemas and protect data.

Create advanced frontend applications with either local or cloud storage, including Vue and primarily React.

Including a total of 14 months internship as a web developer.

## Work

**2022 - Present**

### **Nationalencyklopedin – Frontend developer**

Develop modern interfaces using primarily NextJS (and React), including collaborating with UX designers. I've taken initiative to improve designs and UX. TypeScripted is used over JavaScript where applicable.

Work with tenants from different countries, often in a single application.

Create frontend applications from the ground up, and maintain them. I've also done maintenance and added functionality to older applications.

Collaborate with colleagues in order to improve the architecture and quality of the codebase.

Work in a professional agile environment, primarily using Jira.

## Homelab & selfhosting

**2025 - Present**

Infrastructure, automation and platform; manage dozens of Docker containers and build a platform where services are linked both internally and via web UIs. Last but not least; CI & CD.

Storage and backups; making sure everything is backed up and that redundancy is in place for possible disasters.

Network and security; protect services behind VPN, SSO and other means of authentication & protection. The homelab is accessed only via a VPS and services are only accessible via a reverse proxy.

## Skills

JavaScript

TypeScript

React

NextJS

NodeJS

NestJS

PHP

Laravel

PostgreSQL

MySQL

MariaDB

MongoDB

Websockets

Jest

Nx

Git

CI & CD

Tests
